

FEATURE OVERVIEW

Mutina SecurePath

Protected Information

System Security Plans without the spreadsheets.

> One secure workspace to build your SSP, prove your controls, track your SPRS score, and stay audit-ready for CMMC, NIST, and 25+ other frameworks.

INSIDE THIS OVERVIEW

01 Dashboard & progress tracking
02 Guided, control-by-control SSP builder
03 Live SPRS & FAR scoring with CMMI maturity
04 Reusable evidence library & suggested tasks
05 29-framework support with crosswalk mapping
06 Compliance calendar & automated reminders
07 Teams, roles, auditors & enterprise security

Built for defense contractors, regulated businesses, and the consultants who support them.
mutina.arrakisconsulting.com

WHY MUTINA

Compliance that keeps moving forward

Most compliance programs live in a tangle of spreadsheets, shared drives, and email threads. Controls go stale, evidence gets lost, and the SPRS score is a guess until the week before an assessment. Mutina SecurePath replaces that chaos with a guided, collaborative workspace that turns your System Security Plan into a living document.

Every control, policy, and piece of evidence — connected and protected in one place.

29	110	180	1
frameworks supported	CMMC L2 controls scored live	day review cycle, automated	workspace for every team

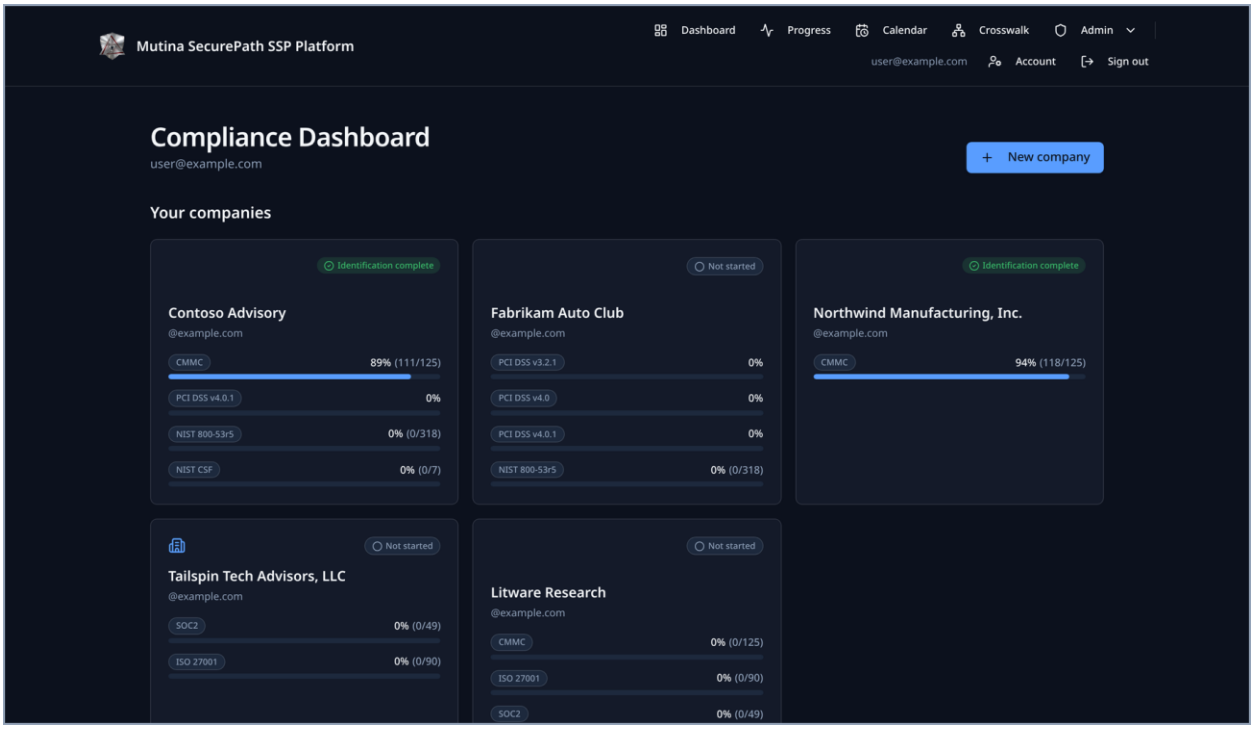

What you get

- **Guided SSP builder** — complete one focused control at a time instead of one giant document.
- **Live SPRS & FAR scoring** — know your score today, not the week before your assessment.
- **Reusable evidence** — upload once, link everywhere, and let Mutina spot duplicates.
- **Automated accountability** — review reminders, assignment digests, and a compliance calendar.
- **Enterprise-grade security** — MFA, single sign-on, tenant isolation, and encryption at rest.

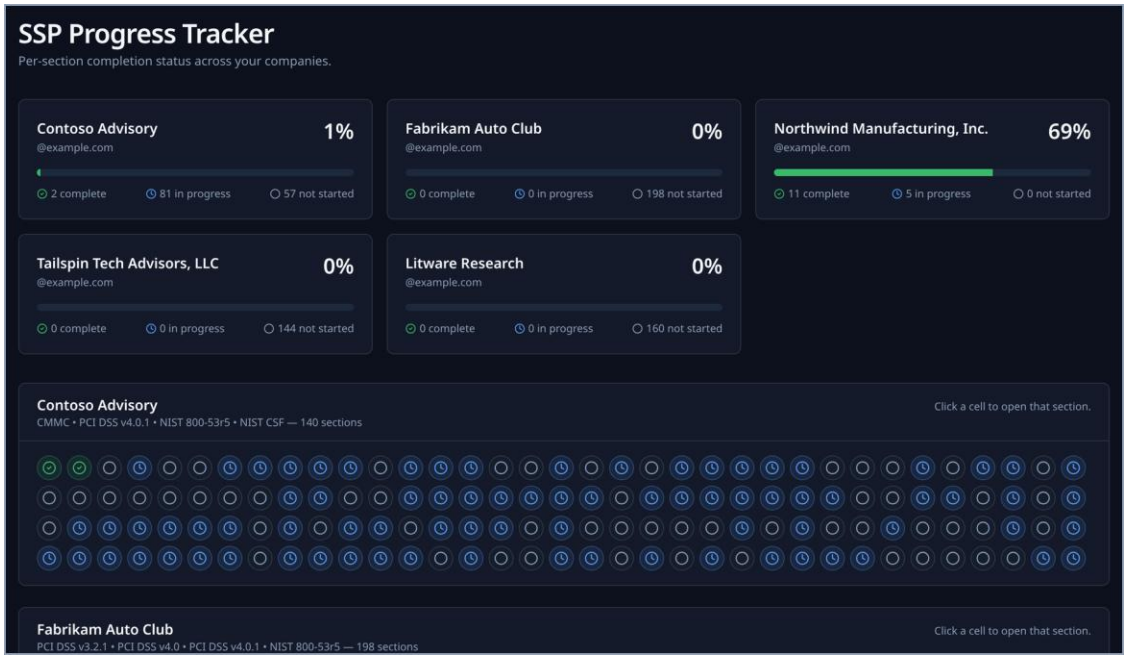

FEATURE 01 · DASHBOARD & PROGRESS

See every program at a glance

The Compliance Dashboard shows every organization you manage, the frameworks each one is pursuing, and exactly how far along it is. Consultants and multi-entity businesses can run many programs side by side while each company's data stays strictly isolated.

Compliance Dashboard — per-company, per-framework progress. (Sample company names shown.)

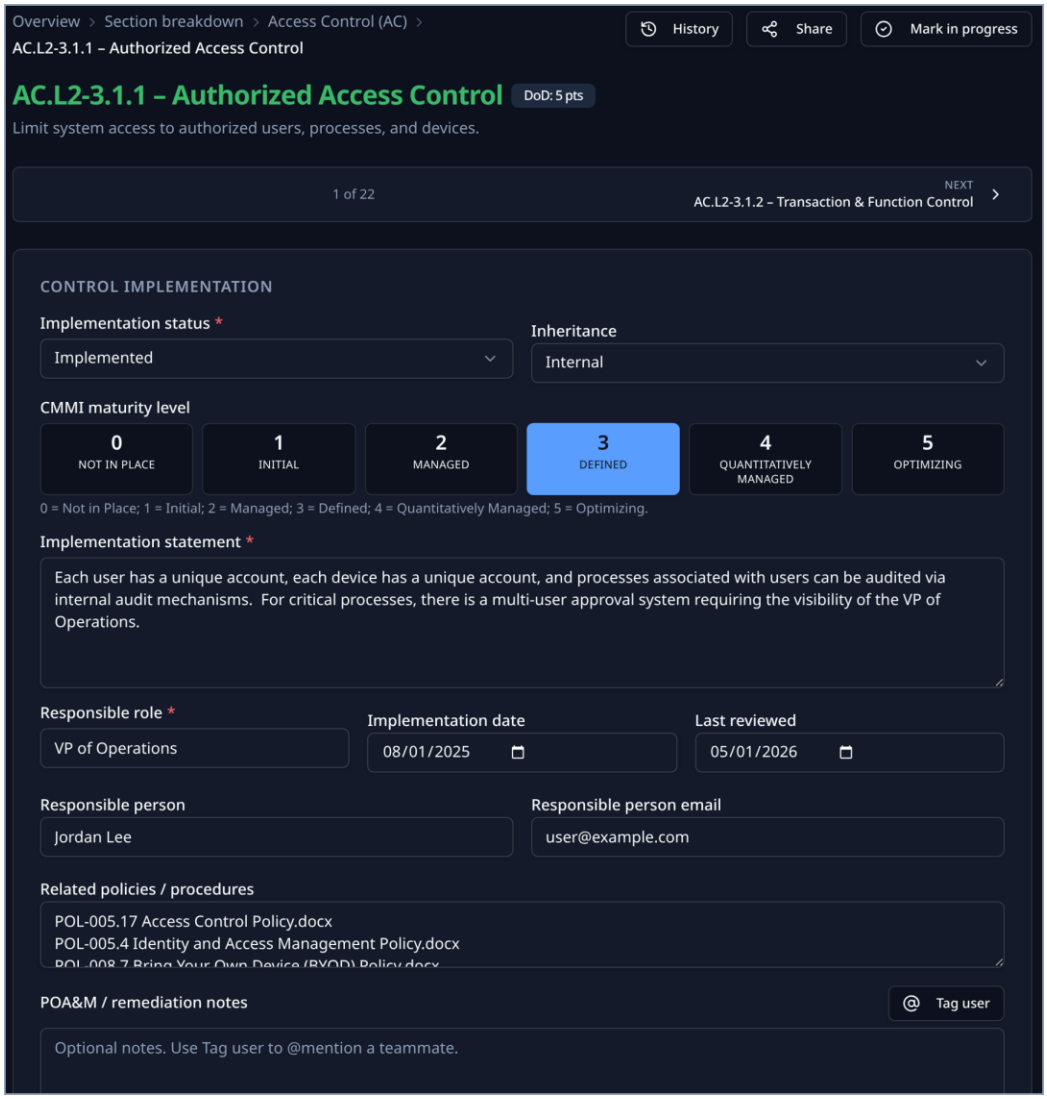

SSP Progress Tracker — every section as a clickable status cell, across all companies.

FEATURE 02 · SSP BUILDER

Build your SSP one control at a time

Each control gets its own focused page with everything an assessor expects to see: implementation status, inheritance, CMMI maturity, an implementation statement, the responsible role and person, review dates, related policies, and POA&M notes. Move to the next control with a single click.

Control workspace — structured fields that map directly to what assessors review.

- **Responsible person & email** on every control, so ownership is never ambiguous.
- **@mention teammates** in POA&M notes to pull the right people into remediation.
- **Full history and secure share links** for every section, plus one-click PDF export of the complete SSP.
- **Versioned snapshots** — finalize the SSP to lock a version and track how it evolves.

FEATURE 03 · SCORING & MATURITY

Know your SPRS score in real time

Mutina calculates your SPRS score from the 110 CMMC Level 2 controls as you work. Implemented and Not Applicable controls earn credit; partial and planned controls do not — exactly as the DoD methodology expects. You also see your FAR 52.204-21 baseline and how far above it you are.

SPRS & FAR-and-above score — updates live as control responses change.

Walk into your assessment with more confidence

No more last-minute scoring spreadsheets. Your score, the controls holding it back, and the evidence behind every credited control are always one click away.

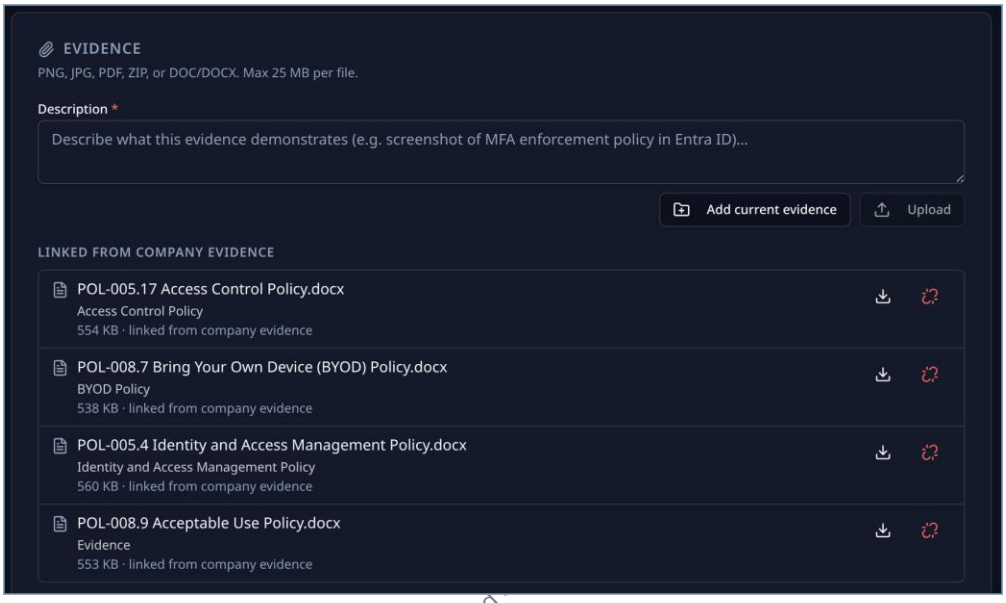

CMMI maturity distribution — click any bar to see the controls at that level.

FEATURE 04 · EVIDENCE & TASKS

Prove it once. Reuse it everywhere.

Evidence lives in a central company library. Upload policies, screenshots, and exports in bulk, describe what each item proves, and link it to any control. When your company pursues more than one framework, Mutina suggests where the same evidence can satisfy similar controls — and flags likely duplicates before they clutter your library.

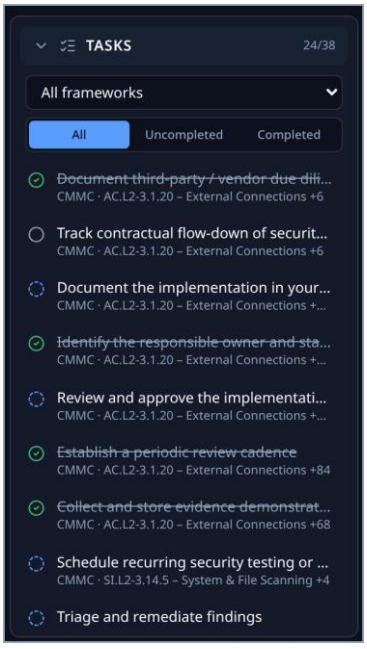

Evidence linked from the company library — every file described, downloadable, and traceable.

Protected

Suggested tasks for every control

Each control comes with suggested implementation steps you can edit, add to, or remove. Tasks roll up into a company-wide list, are de-duplicated across controls, and completion syncs back to every associated control automatically.

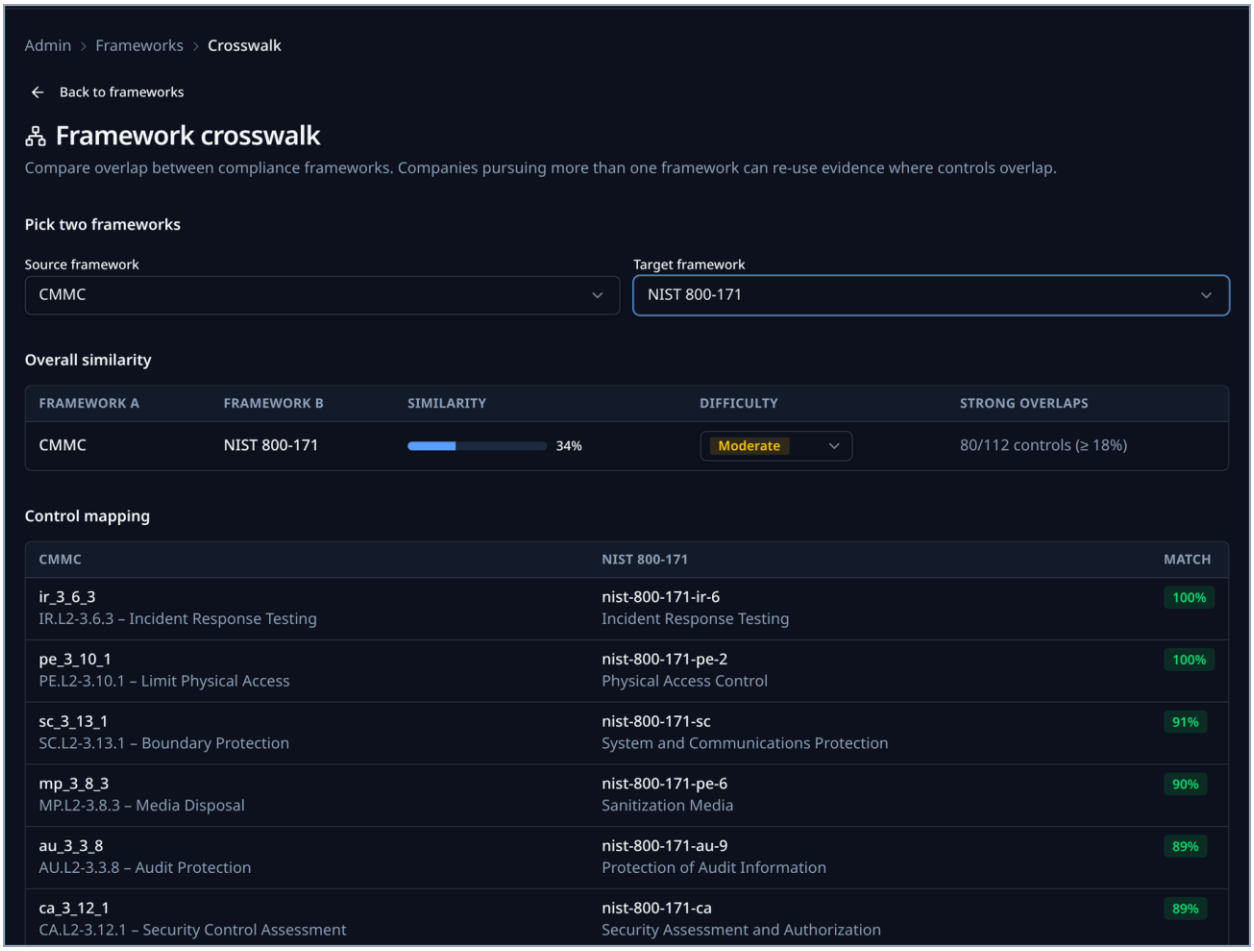

- **Filter** by framework, open, or completed.
- **Any admin** can mark tasks complete.

FEATURE 05 · MULTI-FRAMEWORK CROSSWALK

One program, many frameworks

Mutina supports CMMC (Level 1 and Level 2), NIST 800-171, NIST 800-53, NIST CSF, ISO 27001, SOC 2, PCI DSS, GDPR, FFIEC, CPCSC, and more — 29 frameworks in all with more being added all the time. The Framework Crosswalk compares any two of them side by side, shows how similar they are, and maps each control to its closest counterpart so you can reuse work instead of repeating it.

Framework Crosswalk — pick two frameworks and see overlap, difficulty, and control-to-control matches.

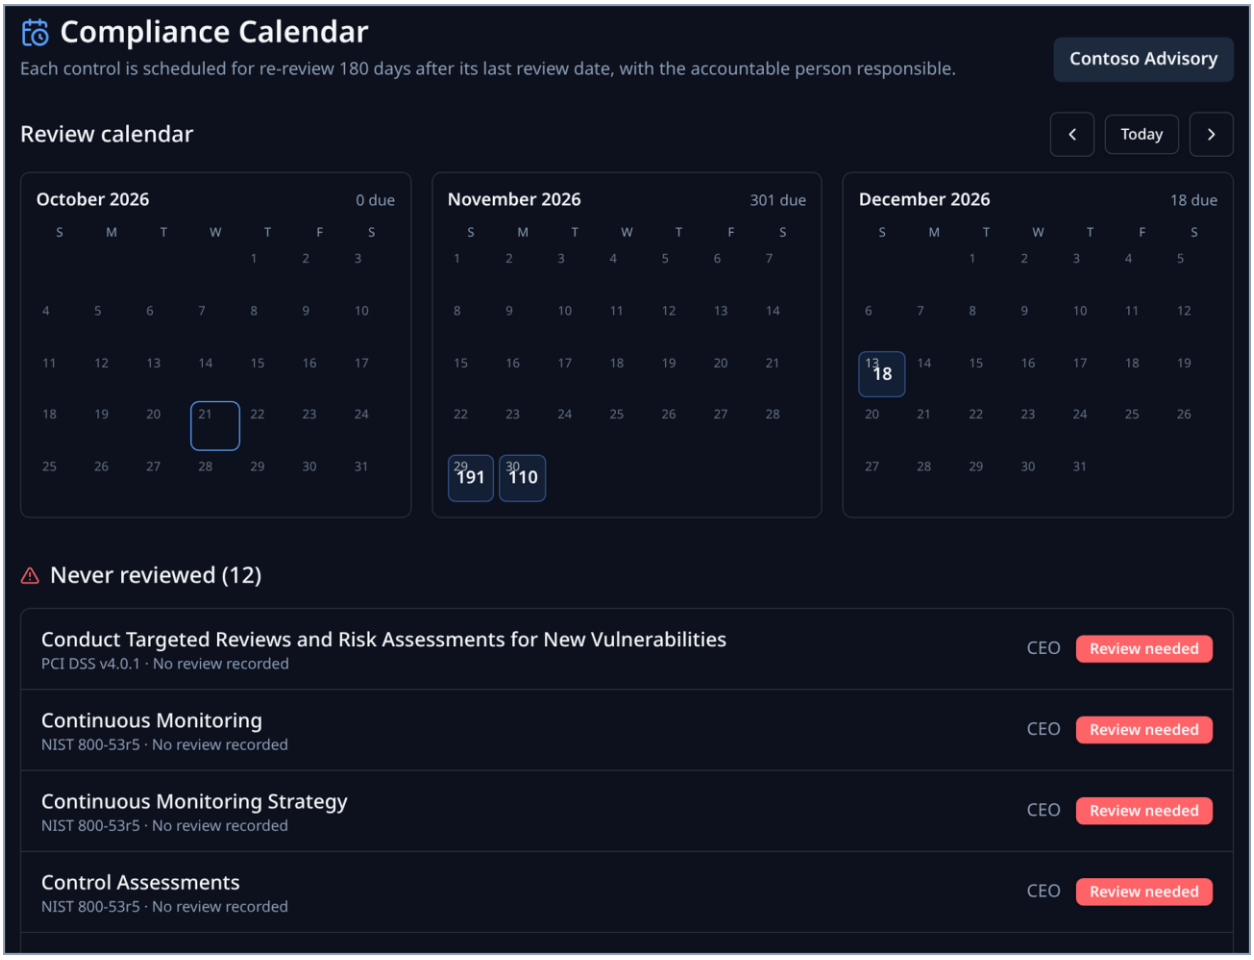

Expand without starting over

Already working toward CMMC? See exactly how much of NIST 800-171, ISO 27001, or SOC 2 you have already covered — and where the gaps are.

FEATURE 06 · CALENDAR & AUTOMATION

Never miss a review again

Every control is automatically scheduled for re-review 180 days after its last review date. The Compliance Calendar shows three months at a time with the number of controls due each day — click a day to see exactly which controls need attention and who is accountable.

Compliance Calendar — due-date counts per day, plus controls that have never been reviewed.

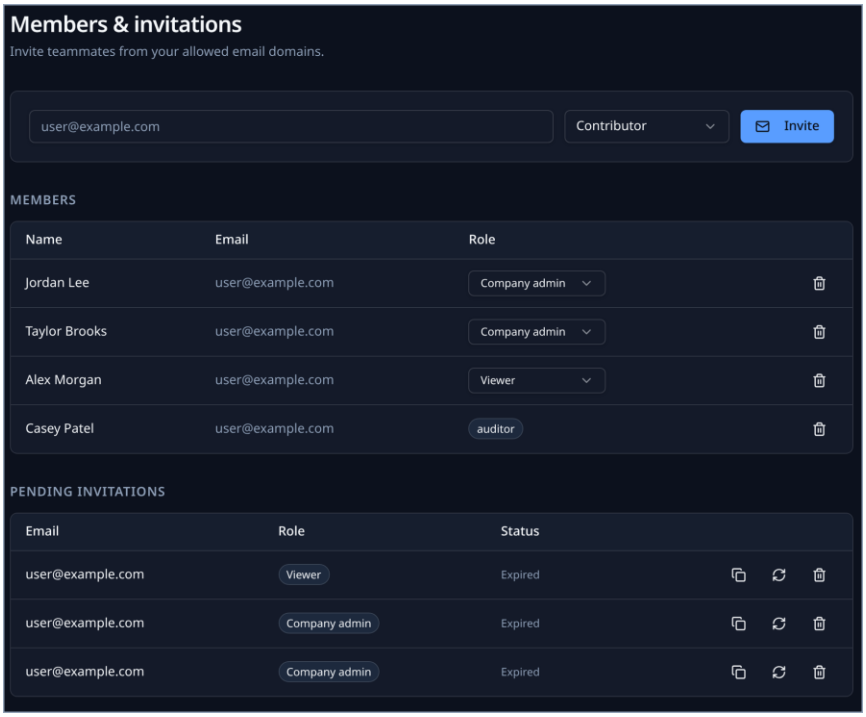

Automated notifications keep everyone on track

- **Review reminders** emailed to the responsible person 7 and 3 days before a control is due — and they stop as soon as the review is recorded.
- **Daily assignment digest** summarizing newly assigned controls and status changes for each person.
- **Mention alerts** whenever a teammate tags you in a control's remediation notes.

FEATURE 07 · TEAMS, ROLES & AUDITORS

The right access for every person

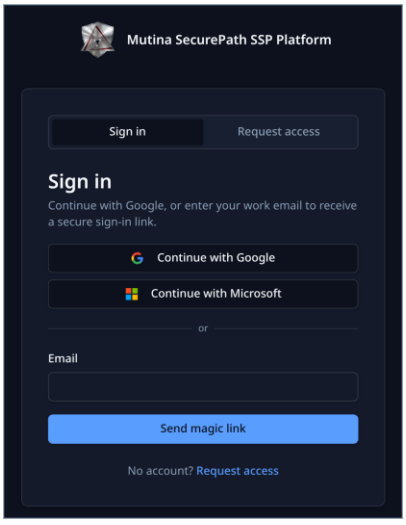

Invite teammates from your company's approved email domains and give each one the access they need. Company admins manage their own team, contributors do the work, viewers follow along — and auditors get read-only access to exactly the companies they are assessing, even with an outside email address.

Members & invitations — roles at a glance, including read-only auditor access. (Names and emails anonymized.)

Security you can stand behind

- **Multi-factor authentication** required for every account.
- **Single sign-on** with Google or Microsoft, or a secure magic link.
- **Strict tenant isolation** — companies never see each other's data.
- **Encryption at rest** for every SSP, snapshot, and file.
- **Activity and access logs** for administrators.

Protected Information

AT A GLANCE

Everything included

Feature	What it does	Why it matters
Guided SSP builder	Control-by-control pages with status, maturity, statements, owners, and dates.	A complete, assessor-ready SSP without the spreadsheet.
Live SPRS & FAR score	Scores the 110 CMMC L2 controls as you work.	Know where you stand every day.
CMMI maturity & coverage	Charts maturity and coverage by control family.	Spot weak areas early.
Evidence library	Bulk upload, required descriptions, duplicate detection, cross-control linking.	Upload once, prove many controls.
Tasks	Suggested steps per control, de-duplicated company-wide.	Clear next steps for every team member.
29 frameworks	CMMC L1/L2, NIST, ISO, SOC 2, PCI DSS, GDPR and more.	Grow your program on one platform.
Framework crosswalk	Compare any two frameworks and map controls.	Reuse work instead of repeating it.
Compliance calendar	Three-month view of control reviews due.	Nothing falls through the cracks.
Automated emails	Review reminders, daily digests, and mention alerts.	Accountability without chasing people.
Roles & auditors	Admin, contributor, viewer, and read-only auditor access.	Collaborate safely with insiders and assessors.
Versioning & export	Finalize snapshots, history, share links, PDF export.	Hand assessors exactly what they need.
Security	MFA, Google/Microsoft SSO, magic links, encryption at rest.	Protect sensitive compliance data.

GET STARTED

Start your path to audit-ready today

Protected Information

Whether you are preparing for your first CMMC assessment or managing compliance for a portfolio of clients, Mutina SecurePath gives you a clear, secure, and repeatable way to get there.

Three steps to get going

1. **Request access** at the link below and tell us about your organization.
2. **Choose your frameworks** — start with CMMC and add more whenever you are ready.
3. **Invite your team** and watch your SPRS score climb, one control at a time.
